

Presentation Video Requirement

As part of Project Cycle 3, each group must submit a short presentation video. The purpose is to confirm project ownership, assess statistical explanation, and practice concise academic communication.

1. Recording Platform

The video must be recorded using one of the following:

- Google Meet
- Microsoft Teams

Simple recording is sufficient. Advanced video production is not expected.

2. Length and Participation

Each student must speak for at least **1 minute**.

Since each group has 2 students, the expected total video length is approximately **2–4 minutes**.

Each student must:

- appear on camera;
- show their face clearly;
- speak in English;
- introduce their full name and student ID at the beginning of their part.

Example:

“Hello, my name is XXX XXXXX, student ID XXXXXXXXX.”

3. Presentation Content

The video should simulate a short academic poster presentation. The main visual material must be the **one-slide infographic summary**.

影片應模擬簡短學術海報發表，並以單頁摘要作為主要內容。

Students should explain:

- research question (研究問題) ;
- group definition (組別定義) ;
- response variable (反應變數) ;
- statistical method (統計方法) ;
- key result (主要結果) ;
- interpretation and conclusion (解釋與結論) .

The presentation must be divided across all group members. Each member should explain a different part of the project.

每位組員必須負責不同部分。

Do not repeat the same information. The presentation should follow one continuous flow.

請勿重複內容，整體簡報應形成自然且連續的流程。

A recommended flow is:

- Student A: research question, group definition, response variable, and method.
- Student B: key result, interpretation, conclusion, and limitation.

Students are encouraged to highlight, annotate, zoom in, or point to specific parts of the one-page summary while explaining.

鼓勵使用：**highlight**、**annotation**、**zoom-in**、**pointer** 協助說明。

The examples below use slide presentations. In this project, students do **not** need to prepare multiple slides. The recording should focus on explaining the **single one-page summary**.

本專案不需要多張投影片，重點是說明單頁摘要。

4. Presentation Style

Students should explain the project naturally instead of reading a full script word-for-word.

Students should:

- maintain reasonable eye contact with the camera;
- use the one-page summary as visual support;
- explain the work in their own words;
- check short notes only occasionally.

Continuous reading from a script is discouraged.

The presentation should resemble a short academic explanation rather than a memorized speech.

5. AI Restriction

The following are not allowed:

- AI-generated narration;
- text-to-speech voice;
- AI avatar presenters;
- synthetic voice replacement;
- AI-generated speaking overlays.

Students must use their own real face and real voice.

Students may still use AI tools for project preparation, coding assistance, grammar checking, or idea organization, but the presentation itself must represent the students' own understanding and explanation.

6. Technical Quality

Advanced editing is not required.

A simple recording is sufficient if:

- audio is understandable;
- the one-page summary is readable;
- faces are visible;
- explanations are clear.

Minor technical issues are acceptable if the presentation remains understandable.

Students are not expected to create cinematic or highly edited videos.

7. Submission

The video must be submitted through the group's own **GitHub repository**, together with the project files.

Each group must include:

- the project repository link;

- the presentation video link.

Place both links inside the project README.md.

Recommended README format:

```
## Project Repository
https://github.com/.....
```

```
## Presentation Video
https://.....
```

The video file may be uploaded directly to GitHub if the file size is acceptable. If the video file is too large, upload it to Google Drive or Microsoft OneDrive and place the shareable link in the README.md.

Make sure the video link is accessible to the instructor and TA.

8. Resources and References

Students may refer to the following resources for recording and presentation ideas:

- How to Present an Academic Research Poster: <https://www.youtube.com/watch?v=0ozwCEeaVWE>
- Example Recording 1 (Clear slide and Face): <https://www.youtube.com/watch?v=-U2RfiRiQzo>
- Example Recording 2 (Clear slide and Face): https://www.youtube.com/watch?v=aLjhM_zwVhY

The examples above use slide presentations. In this project, students should focus on presenting the **single one-page summary** clearly and concisely.

9. Evaluation

The presentation video will be evaluated based on:

- clarity of explanation;
- correctness of statistical interpretation;
- visible participation of both members;
- organization and presentation flow;
- effective use of the one-page summary;
- professionalism.
